INSPIRING STUDENT INNOVATION

Truth Identification from ECG Signal By using convolution neural network: Lie Detection

A Team Of Centre For Advanced Studies, Junior Research Fellow And 2nd Year M.tech Student Have Developed An Ai Lie Detector That Can Analyse The Brain Signals Of A Person And Detect If A Person Is Telling The Truth Or Lying. Deep Learning Has Been Used To Train And Test The System With 14 Channel 1d Eeg Signal Data To Make It Efficient And Robust For Real-time Implementation. The System Developed Will Be Highly Effective In Criminal Investigations And Other Applications. currently Polygraph Technique Is Used For Truth Identification Which Relies On Physiological Reactions Of A Person That Can Be Controlled And Hence The Method is not so effective to overcome This Our Model Uses Live Recorded Brain Signals Which Cannot Be Altered.

CENTRE FOR ADVANCED STUDIES INNOVATION THAT WILL HELP IN ANALYSING BRAIN SIGNALS OF A PERSON AND DETECT IF A PERSON IS TELLING TRUTH OR LYING
