INSPIRING STUDENT INNOVATION

Artificial Intelligence based Automatic diagnosis of Epilepsy Seizure, a Neural Brain diseases using Electroencephalogram Signals

A team of Centre for Advanced Studies students developed a deep learning model that is fast, effective and non-invasive in the diagnosis of epilepsy seizure using Electroencephalogram (EEG) signals. The system contains a robust pre-processing module to automatic removal of artifacts from the EEG signals and an epilepsy seizure detection module for detection the abnormal activity in the brain due to epilepsy.

The deep learning model is trained on large EEG data corpus for better generalization. The system is real time and ready to deploy in healthcare sector.

CENTRE FOR ADVANCED STUDIES STUDENTS INNOVATION IN TIMELY DIAGNOSIS OF NEURAL BRAIN DISEASE LIKE EPILEPSY SEIZURE FOR THE COUNTRY WHERE, THERE IS SHORTAGE OF NEUROLOGISTS.
