Research Seminar Series

Seminar -9

Deep Generative Models in Deep Learning

DATE & TIME:
30th November 2021,
4:00 PM.

SPEAKER

Chetana Singh

Research Scholar
Centre for Advanced Studies,
AKTU, Lucknow

PLATFORM & WEB-LINK
Google Meet

ABSTRACT

Current state-of-the-art neural networks are capable of achieving high performance in accuracy, making them the first choice for complicated applications. A Generative Model is a powerful way of learning any kind of data distribution using unsupervised learning and it has achieved tremendous success in just few years. All types of generative models aim at learning the true data distribution of the training set so as to generate new data points with some variations. But it is not always possible to learn the exact distribution of our data either implicitly or explicitly so we try to model a distribution which is as similar as possible to the true data distribution. For this, we can leverage the power of neural networks to learn a function which can approximate the model distribution to the true distribution.
