INSPIRING STUDENT INNOVATION

Artificial Intelligence Based Automatic Identifying Problem in Spinal Cord Using Gait Patterns

A team of Centre for Advanced Studies developed an Artificial Intelligence-based "Automatic Identifying Problem in Spinal Cord Using Gait Patterns." to early detection of problem-related to the spinal cord. The detection is based on Gait Cycle (Walk on Gait Sensors) that can use to predict different problem related to the spinal cord which is physical discomfort occurring anywhere on the spine or back ranging from mild to disabling.

AN INNOVATION BY STUDENT OF CENTRE FOR ADVANCED STUDIES THAT WILL HELP TIMELY IDENTIFY SPINAL CORD PROBLEM AND PREVENT FROM PROBLEMS SUCH AS MUSCLE STRAIN, OBESITY, SLIPPED DISK, SCOLIOSIS AND OSTEOPOROSIS.
