INSPIRING STUDENT INNOVATION

SLINet: Dysphasia Detection in Children using Deep Neural Network

A team of Centre for Advanced Studies M.Tech and JRF Jointly developed a novel and robust deep learning model that can effectively identify and classify the Specific language impairment in children. The deep learning model can be deployed in cloud-based servers for ubiquitous access and can also be integrated with a digital signal processor (DSP) board for the offline access. The model is trained on large data set for better generalization. The system can be trained on various Indian regional languages for wide use in child healthcare sector.

A TEAM FROM CENTRE FOR ADVANCED STUDIES DEVELOPED AN INNOVATIVE METHOD USING ARTIFICIAL INTELLIGENCE FOR DETECTION OF DYSPHASIA DISEASE USING MODERN DEEP LEARNING APPROACH FOR CHILDREN HAVING SPECIFIC LANGUAGE IMPAIRMENT.

RESEARCH TEAM

Manoj Kaushik
M.Tech CSE(2019-21)

Neeraj Baghel
Junior Research Fellow
